

HTS SERIES

Tank Shears

The HTS series tank shears are special equipment dedicated to cutting tanks and flat iron plates. They can cut a rectangular slot in the steel, producing smooth and straight edges of steel plates on barges, railway cars, grain, water, oil and fuel tanks, always leaving the remaining sections flat and easy to handle. The standard range goes from 2 to 7 ton of weight and allows the cutting of flat iron plates with thickness from 20 to 40 mm.
